MAY 29 2012

Mr. David Klein  
Greenwood Industries, Inc.  
50 Howe Avenue  
Millbuey, MA 01527

Dear David,

On behalf of the copper industry, the Copper Development Association Inc. (CDA) and the Canadian Copper and Brass Development Association would like to congratulate and thank you for your submission to the fifth annual **North American Copper in Architecture** awards program. We are delighted to inform you that your project, **Massachusetts State House**, was one of only 17 selected as a 2012 recipient.

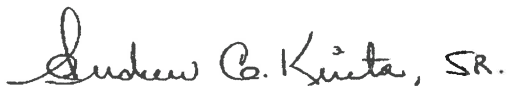

To commemorate that designation, we would like to present you with a custom-framed copper etching of the project. We hope it will be displayed with pride at your offices, as it represents a celebration of copper's rightful place in the world of architecture and building construction and boasts a distinction of which any firm would be proud. If you would like to have one of our project managers join you for a presentation of the award at your location, please contact Marie Yetzetta at [myetzetta@cda.copper.org](mailto:myetzetta@cda.copper.org) or by phone at 212.251.7218. In addition, we will issue a press release on the results of the program and feature a profile of your project on [www.copper.org](http://www.copper.org) and [www.coppercanada.ca](http://www.coppercanada.ca).

We sincerely believe that as architects and contractors, you share with us a keen appreciation of the enduring properties of copper that make a highly-desirable material with which to work, not only for those who design and build residential and commercial structures, but also for those who are engaged in historic restoration projects.

The program's goal is to identify those projects that have succeeded in blending the various elements of copper use in a particular structure: design, installation and innovation. With that said, the task of recognizing only a few projects from a field of many solid entrants was difficult, as each project was meritorious in its own right.

We invite you to continue submitting such worthy projects to the **North American Copper in Architecture** awards program in the future. In the meantime, should you have any questions about copper or require technical information about its use, please do not hesitate to contact us at 800-232-3282. You may also visit [www.copper.org](http://www.copper.org), the ultimate resource for information about copper and copper alloys.

Sincerely,

Andrew G. Kireta Sr.  
President  
Copper Development Association

Stephen Knapp  
Executive Director  
Canadian Copper & Brass Development Association
